

ECOLUX | JOHNS & CO

FROM CONCEPT TO COMPLIANCE: ECO LIGHTING FOR JOHNS & CO

OVERVIEW

When Johns & Co, a leading London estate agency, set out to open their new showroom on City Island, they wanted a lighting solution that not only matched the prestige of their brand but also elevated the workplace experience. Initially leaning towards track spot lighting to replicate the style of their existing office, the client partnered with Ecolux to explore alternative options that could deliver superior performance, energy efficiency, and long term cost savings.

Working closely with Johns & Co and their preferred installation partner, Ecolux developed a tailored solution that struck the perfect balance between design and functionality, ensuring both compliance and visual excellence.

PROJECT SCOPE

Ecolux was tasked with consulting, designing, and supplying all lighting and emergency lighting for the new office. This included developing an alternative to track spot lighting, ensuring UGR compliant office illumination, and providing a reliable emergency lighting system, all while collaborating seamlessly with the installers.

AT A GLANCE

Client: Johns & Co Estate Agents

Location: City Island, London

Project Scope:

Consultation, design, and supply of all general and emergency lighting for the new Johns & Co office showroom.

SUSTAINABLE IMPACT

LED lighting cuts energy use by up to 80%, lowering costs and carbon emissions. With longer lifespans and less waste, it's a simple switch that delivers real environmental benefits and supports a more sustainable future.

THE OUTCOME

The new lighting design greatly improved both performance and efficiency. By moving away from track spot lighting, Ecolux delivered a UGR compliant solution that created a brighter, more comfortable workspace while also achieving significant cost savings. The result was a modern showroom that balanced aesthetics with efficiency, perfectly aligned with Johns & Co's goals.

WHY ECOLUX?

Ecolux is the go to partner for efficient lighting solutions because we combine technical expertise with a commitment to sustainability and client focused design. From consultation through to installation, we deliver bespoke systems that reduce energy use, lower costs, and create high performing spaces, making us a trusted choice for businesses across the UK.
